4 Leverage

- 4.1 Using leverage in trade is a way for traders to borrow capital to gain a larger exposure to the FX market. They can control a larger trade size with a limited amount of money. This could lead to more significant profits and losses as they are based on the total value of the position.
- 4.2 The high degree of "Leverage" is a particular feature of CFDs trading Contracts. The effect of leverage makes investing in CFDs riskier than investing in the underlying asset. This stems from the margining system applicable to CFD, which generally involves a small deposit relative to the size of the transaction so that a relatively small price movement in the underlying asset can have a disproportionately dramatic effect on your trade. This can be both advantageous and disadvantageous. A slight price movement in your favour can provide a high return on the deposit. However, a small price movement against you may result in significant losses that could exceed the deposit money. Such losses can occur quickly—the greater the leverage, the greater the risk. Therefore, the size of leverage partly determines the investment's result. One of the primary risks of leverage trading is that it amplifies your potential losses, potentially to the point where you can lose more money than you have available. The customer agrees that the company shall not be liable for the loss.
- 4.3 To change the leverage, the customer must send a request of changing leverage through the cabin. Our Backoffice team will respond to the request after verifying the account.
- 4.4 The trading leverage is a company service to the Customer, and the company has no obligation for this service. The company has the right to change the leverage per account without informing the Customer based on market fluctuations, the risks of the company, and the conditions of the trading Liquidity Provider. If the Customer is at a loss, the company will not bear any responsibility for the loss due to the change of leverage.

5 Spread

- 5.1 A spread is a **difference between the ASK and BID prices**. In other words, it is the cost of trading. The bid price is the price a financial trader is willing to sell a trading instrument. The ASK price is the price at which a trader will buy a trading instrument. Both of these prices are given in real-time and are constantly updated.
- 5.3 Spreads in this type of trading account are **Floating Spread** there is no maximum and minimum in this type of spreads.
- 5.4 In buy Order (Buy, buy Stop, buy limit), the trade positions are opened at the ASK price and will be closed (stop loss / take profit / manually close order) at the BID price.
- 5.5 In Sell Order (Sell, Sell Stop, sell limit), the trade positions are open at the BID price and will be closed (stop loss, take profit, manually close order) at the ASK price.
- 5.6 Only the ASK price is recorded in the chart trading platform's history, and the BID's price is not recorded, but it can be seen on the market watch platform but not saved in the chart.
- 5.7 As mentioned in the agreement, misuse of the low spreads by any means is unacceptable.

6 Executions

- 6.1 Execution is the completion of a buy or sells order for a security. The execution of an order occurs when it gets filled, not when the investor places it. When the investor submits the trade, it is sent to Delta FX Broker, who determines the best way to execute it.

Market Execution is the method by which traders execute orders at the current price within fractions of a second. The price can be either higher or lower than the one the trader sees in the terminal window, as prices constantly change.

Instant Execution is the method by which brokers execute orders at the trader's requested price or not at all. In other words, if the price of an instrument changes as you place an order, the broker will send you a notification (requote) to confirm that you agree to the newly changed price.

- 6.2 In the standard accounts of Delta FX Broker, there are several trading symbols in the form of instant and market executions, in which the terms of the transaction are different. For information about the type of transaction execution within the trading platform, you can see the information required about each trading symbol in the Specification section on the trading platform.

7 Commission:

- 7.1 In trading accounts, some symbols will have the commission depending on the trading volume. Information about the amount of commission can be found in this document in the Trading Instrument section, in Delta FX website.
- 7.2 On the Mt4 version of the desktop platform, you can activate the desired option in the terminal section to see the amount of open and closed trading commissions. On the platform Mt4 mobile version (Android and iOS), the amount of commission deducted is visible in the selection of fees with a click on each transaction.
- 7.3 The commission can be increased or decreased based on company decisions during the trading session. To know the amount of commission that is part of your cost, you can contact the company's support department.

8 Slippage

- 8.1 The slippage price is mentioned in the Forex Slippage market. The slippage time coincides with you entering a position at the price you see on the chart, but the position will change to a different price. Slippage is when the price is so high that the market is doubtful. Slippage occurs in Market Order, Stop Loss (S / L), Take Profit (T / P), and Pending Orders.
- 8.2 Slippage can happen in these situations: Important news during the market, market Gaps, large market fluctuations, at the beginning of the transaction in the market after the market holidays or the end of the trade before the start of the market holidays.

9 Scalp Trading

- 9.1 Scalp Positions are allowed on these account types. However, if the number of scalp transactions is too high system will have your account identified as an automatic scalper, in that case, because of the possible risks and the Liquidity Providers rules, the following conditions may occur:
 - (a) Reducing the speed of the trading platform during the execution of requests;
 - (b) Receive a "requote" notification during execution
 - (c) Increased slippage
 - (d) Pay more commission
 - (e) The spread on your trades will increase

10 Swapp

This type of account is an Islamic account, meaning it is a free swap account.

+90 212 982 84 79

Kuştepe Mah., Mecidiyeköy Yolu Caddesi No 12 Trump Tower Kat 4 Ofis No 405 Şişli, İstanbul

support@deltafx.com
